

ABSTRACT

The present invention relates to a cosmetic or dermatological composition for the treatment of keratinous materials, particularly hair, comprising in a cosmetically acceptable medium at least a grafted silicone polymer with a polysiloxane skeleton grafted by organic non-silicone monomers and at least an aqueous dispersion of insoluble particles of non-ionic and cationic polymers. The compositions of the invention are used particularly as rinsed products or as non-rinsed products, particularly for hair washing, hair care, hair conditioning, hair dressing, or hair setting.
